GENERAL INFORMATION ON

INFECTIOUS DISEASES CONTROL THROUGH STRENGTHENING OF COMMUNITY HEALTH SYSTEM (A)
課題別研修「地域保健システム強化による感染症対策 (A)」
JFY 2017
NO. J17-04421 / ID. 1784412
Course Period in Japan: From July 26th to September 16th, 2017

This information pertains to one of the JICA Knowledge Co-Creation Program (Group & Region Focus) of the Japan International Cooperation Agency (JICA), which shall be implemented as part of the Official Development Assistance of the Government of Japan based on bilateral agreement between both Governments.

‘JICA Knowledge Co-Creation Program (KCCP)’ as a New Start

In the Development Cooperation Charter which was released from the Japanese Cabinet on February 2015, it is clearly pointed out that “In its development cooperation, Japan has maintained the spirit of jointly creating things that suit partner countries while respecting ownership, intentions and intrinsic characteristics of the country concerned based on a field-oriented approach through dialogue and collaboration. It has also maintained the approach of building reciprocal relationships with developing countries in which both sides learn from each other and grow and develop together.” We believe that this ‘Knowledge Co-Creation Program’ will serve as a center of mutual learning process.
I. Concept

Background

Sustainable Development Goals (SDGs) were adopted by the United Nations in September 2015. Built on the Millennium Development Goals (MDGs), which ended in 2015, the SDGs are specific targets to be reached by 2030. Three of the eight goals in MDGs, ‘reduction of child mortality’, ‘improvement of maternal health,’ and ‘combating HIV/AIDS, malaria and other diseases’ were not achieved despite global efforts. These goals were extended as part of the SDGs. In all, the SGDs include thirteen health associated targets. Goal 3 is to “Ensure healthy lives and promote well-being for all at all ages.” To achieve the targets, global efforts are required in both developing countries and developed countries.

Many developing countries still face difficulties providing infectious diseases control services in all regions. There are many reasons for this, including lack of human resources, budget, equipment, and facilities. Regional disparity in infrastructure, patient transportation, and inadequate health administration are particular problems that need to be addressed. Improving health systems in developing countries is essential to achieving global health goals. Using case studies from Okinawa and Japan, this program is designed to assist those responsible for nursing management to propose improvement plans that will impact infectious diseases control.

Okinawa Prefecture, which is the southernmost regional government in Japan, is made up of around 160 islands, many quite remote. This regional government has long focused on addressing infectious diseases issues. Much of this emphasis stems from post-World War II reconstruction when Okinawans suffered in extremely poor health conditions with inadequate medical staff and facilities. By implementing initiatives to improve its health systems, Okinawa succeeded in achieving Universal Health Coverage.

This program aims to leverage the success of the experience in Okinawa Prefecture and provide the knowledge, skill, and structure for participants to solve infectious diseases control issues through public health activities in their home countries.

For what?

This program, based on the success in Okinawa Prefecture, aims to provide participants with knowledge, skills, and keys to solve the issues on infectious diseases control in developing countries.

For whom?

This program is designed for those who in a nursing position* or its supervising position to be responsible for planning, implementation, evaluation and management of infectious diseases control in public health sections of central or local governments
which address to improve public health.

*Nursing position: In this document, nursing position implies a midwife and a public health nurse.*

**How?**

This program is designed to provide the opportunity to the participants,
1) to analyze the obstacles on infectious diseases control in their countries in comparison with those of Okinawa and Japan,
2) to obtain the clues to improve their current situation through learning the experience of measures taken in Okinawa Prefecture, which is one of the local government located southernmost in Japan, on its health administration especially just after the WW II.

Okinawa has good practices of the control of tuberculosis, parasitic diseases such as malaria and filariasis, but do NOT have a lot of experiences of HIV/AIDS, so this program does not put much focus on HIV/AIDS control.

VI. ANNEX:

Guidelines for Job Report

As written in the GI (General Information), all participants of the program are required to submit the Job Report before coming to Japan. This report is very important information for program organizers in Japan to understand your needs and your working environment. They would arrange the program to suit the participants’ needs as much as possible. Therefore, please make sure that your job report is precise and informative.

I. Job Report Presentation

You are scheduled to give a job report presentation.

➢ Purpose: To introduce your country/your responsible area and the situation regarding infectious diseases
➢ Schedule: The 2nd week of the program in Japan
➢ Participant: Program organizers and lecturers
➢ Time: 10 minutes for each participant
➢ Software: Microsoft Power Point (PPT)

II. Preparation and submission of Job Report

<Preparation>

➢ Please see attached Job Report Presentation Format and make your own presentation.
➢ **Because of the time limitation, number of slides is limited up to 13.**
➢ It is recommended to use photos in your presentation, such as your daily activities, health facilities, and people’s life in your area.

※Please bring additional photos related to health issues aside from photos in your Job Report. You may need these photos when completing your Job Report in Japan.

<Submission>

Your job report will be translated into Japanese to distribute the handouts to the Japanese audience. For this reason, you cannot revise your report after the submission. And for making translation report, please submit report in PPT format. (Handwritten or PDF report is not acceptable.)

● For further questions, please contact following e-mail address, ‘oicttp@jica.go.jp’.
JICA and Capacity Development

The key concept underpinning JICA operations since its establishment in 1974 has been the conviction that “capacity development” is central to the socioeconomic development of any country, regardless of the specific operational scheme one may be undertaking, i.e. expert assignments, development projects, development study projects, training programs, JOCV programs, etc.

Within this wide range of programs, Training Programs have long occupied an important place in JICA operations. Conducted in Japan, they provide partner countries with opportunities to acquire practical knowledge accumulated in Japanese society. Participants dispatched by partner countries might find useful knowledge and re-create their own knowledge for enhancement of their own capacity or that of the organization and society to which they belong.

About 460 pre-organized programs cover a wide range of professional fields, ranging from education, health, infrastructure, energy, trade and finance, to agriculture, rural development, gender mainstreaming, and environmental protection. A variety of programs and are being customized to address the specific needs of different target organizations, such as policy-making organizations, service provision organizations, as well as research and academic institutions. Some programs are organized to target a certain group of countries with similar developmental challenges.

Japanese Development Experience

Japan was the first non-Western country to successfully modernize its society and industrialize its economy. At the core of this process, which started more than 140 years ago, was the “adopt and adapt” concept by which a wide range of appropriate skills and knowledge have been imported from developed countries; these skills and knowledge have been adapted and/or improved using local skills, knowledge and initiatives. They finally became internalized in Japanese society to suit its local needs and conditions.

From engineering technology to production management methods, most of the know-how that has enabled Japan to become what it is today has emanated from this “adoption and adaptation” process, which, of course, has been accompanied by countless failures and errors behind the success stories. We presume that such experiences, both successful and unsuccessful, will be useful to our partners who are trying to address the challenges currently faced by developing countries.

However, it is rather challenging to share with our partners this whole body of Japan’s developmental experience. This difficulty has to do, in part, with the challenge of explaining a body of “tacit knowledge,” a type of knowledge that cannot fully be expressed in words or numbers. Adding to this difficulty are the social and cultural systems of Japan that vastly differ from those of other Western industrialized countries, and hence still remain unfamiliar to many partner countries. Simply stated, coming to Japan might be one way of overcoming such a cultural gap.

JICA, therefore, would like to invite as many leaders of partner countries as possible to come and visit us, to mingle with the Japanese people, and witness the advantages as well as the disadvantages of Japanese systems, so that integration of their findings might help them reach their developmental objectives.
